

## Ynibox : core values and vision

We are a non-profit and civil society based organization. We believe that librarians and project holders worldwide can be helped. The Ynibox is designed to strengthen their initiatives. Here is why we developed the project.

### *Freedom*

- **Free contents** : all preloaded contents in the server are Creative Commons. We strongly encourage users to add only CC resources, to allow users to use and share them.
- **Free training materials** : all supports for training are free. You can use them to learn how to appropriate the system.
- **Free software** : all components are under free license. Most of the software is GPL, part of it is CECILL. Means you can share these with other, and redistribute.

### *Worldwide access to knowledge*

- **Universal compatibility** : the system fits on almost any computer out of the shelf.
- **Offline resources** : the contents are distributed through the wifi chipset, in a close range. Everything is stored on the computer and internet connection is not mandatory. Many languages can be implemented.
- **Low power** : the system can be powered by solar panel, so even remote communities, far from electric grid, can enjoy it.

### *Involvement of civil society*

- **Communities** can personalize the server, resources and catalog to fit their needs and make them available for their community members.
- Readers and members of the community can **contribute and share** their creations using the server.
- Any project holder can create or empower its library from scratch using both **digital tools and training materials**. They can be autonomous in the whole process.
